

Web SQL Database is a web page [API](#) for storing data in [databases](#) that can be queried using [SQL](#) variant. The API is supported by [Google Chrome](#), Opera and the [Android Browser](#). The [W3C](#) Application Working Group ceased working on the specification in November 2010, citing a lack of independent implementations as the reason the specification could not move forward to become a W3C Recommendation.

[Mozilla Corporation](#) was one of the major voices behind the break-up of negotiations and deprecation of the standard, while at the same time being the main proponents behind an 'alternative storage' standard, [IndexedDB](#).
